AVIATION CONCEPTS INC (ACI) RECEIVES ARG/US PLATINUM RATING

Guam, Asia Pacific – On September 30th, 2009, the Aviation Research Group (ARG/US) awarded ACI its coveted Platinum Rating, the most recognized and sought-after rating in all of private aviation

Headquartered in Cincinnati, OH, and operating since 1995, ARG/US is considered the foremost expert in performing on-site safety audits for corporate flight departments, charter operators, and commercial airlines. In conducting the ACI audit, ARG/US dispatched a team of highly experienced aviation auditors to Guam to carry out a thorough week-long on-site inspection of the company's 50,000 square foot hangar facility. Conferred to only a selective few, the Platinum Rating means that ACI's customers can always expect the very best quality of service in the safest environment possible.

As a leading aviation company in Asia and the Pacific for nearly 15 years, ACI's strategic location in Guam, USA, has allowed it to offer something unique to the typically underserved aircraft owners of the region: the security that accompanies FAA certification. Since commencing operations in 1996, ACI's international reach and global flight approval have enabled it to maintain and operate some of the finest business jets available including Falcon 50/900, Gulfstream IV/V/550, Challenger 604, Learjet 60, Global Express, and Boeing Business Jets.
